NCCT SCAN OF PELVIS BOTH HIP JOINTS (3D RECONSTRUCTION)

Clinical profile:- known case of right hip ewing sarcoma – post operative / post chemo radio therapy status 2004.

Findings:-

Study reveals:

- **Non visualization of right hip joint, femoral neck, lower part of iliac blade, ischium and pubic bones – post operative status.**
- **No evidence of any mass lesion is seen.**
- **Proximal cranial migration of right femoral shaft.**
- **Diffuse fatty muscle atrophy in right pelvic, gluteal muscles & medial adductor compartment muscles of right hip.**

Normal alignment of the left hip joint is seen.

No evident erosion or destruction of the articular margins of femoral head and acetabulum on left side with well preserved joint space.

No evident sequestration / pathological fracture noted in present study.

Bilateral sacro-iliac joints are unremarkable.

No evident free or loculated fluid collection in pelvis or peritoneal cavity.

Please correlate clinically
